## FSR Equipment Buying Index

The index is a simple measure of planned buying behavior of for-hire, private and government fleets over the next three months. A lower reading indicates that orders for Class 8 trucks may be slower for the quarter and a higher reading would indicate improved order activity.

*\*FSR Equipment Buying Index adds the percent of quarterly FSR\*\* Inquiry respondents who plan to place orders for power units and trailers in the next (3) months plus the estimated size of the planned orders calculated as a weighted average for response group. Q1 2008 = 100 (100= 49% plan to purchase power (12% of group inventory) + 49% plan to purchase trailers (3% of group inventory))*
