Pressure Systems International Announces New Tire Pressure Monitoring System for Commercial Vehicles - TireView™

San Antonio, TX (November 6, 2018) Pressure Systems International (P.S.I.) announces TireView™, a new robust tire pressure monitoring system (TPMS) designed for the demanding commercial vehicle market. TireView will be available to the market in early 2019.

P.S.I. acquired TPMS product provider, TST, in April 2017. Since that time, in addition to growing its existing presence in the RV market, P.S.I. has adapted TST's proven TPMS design to offer commercial vehicle operators a unique and reliable tire pressure monitoring solution.

Adding TPMS to the P.S.I. product line represents a key expansion of the company's portfolio in order to provide a "bumper-to-bumper" solution for tire management. The first phase of the TireView launch will include a 'stand-alone' solution for the truck and tractor market. This will be followed by solutions for trailers as an enhancement for P.S.I.'s automatic tire inflation system (ATIS) for trailers or as a stand-alone. Additionally, TireView will offer elegant solutions to common sensor management challenges with an optional flow-thru kit. The flow thru kit enables the sensors to remain mounted to the axle during routine tire maintenance while still providing damage protection and theft resistance.

"We see TPMS and ATIS as complimentary solutions, not competitive.", commented Jonathan Gravell, vice president of business development for P.S.I. "Both

approaches bring their own set of benefits. Automatic inflation is always the most desired approach. However, adding TireView will provide fleets with enhanced tire data allowing them to identify the specific tire that requires attention, which no other system can do today.”

P.S.I. is also working with leading telematics providers to give fleets the capability of viewing tire status remotely for pro-active maintenance.

Both TPMS and ATIS are defined as GHG-II approved technologies that are being adopted at the state level, led by California.

[About Pressure Systems International](#)

Pressure Systems International is the world leader in automatic tire inflation systems, tire pressure monitoring systems and related products for commercial trucks and trailers. P.S.I. is a privately held company based in San Antonio, TX, and exports to 45 countries including China, India, South America, Africa, Australia and Europe. P.S.I. is a ISO 9001 Quality Management certified. For more information about Pressure Systems International visit their website www.psitireinflation.com
