Pressure Systems International Celebrates 25th Anniversary During Annual Fleet Event

San Antonio, TX (October 26, 2018) During 2018 Pressure Systems International (P.S.I.) is commemorating the 25th anniversary of its development and introduction of the first automatic tire inflation systems (ATIS) for commercial vehicles. P.S.I. and their partners celebrated this milestone during the annual Fleet Technology Event co-sponsored by Meritor and P.S.I. held October 9-10 in San Antonio, TX.

During the past 25 years, P.S.I. has taken ATIS from a technology newcomer, to being a popular feature specified on over 65% of trailers built in North America today. P.S.I. has set the trend and remains the market leader with over 1.4 million systems. With customers in over 45 countries, it is the only global ATIS solution.

P.S.I.'s ATIS for trailers, chassis and dollies automatically adds air to the tire as the vehicle is rolling down the highway whenever the tire pressure drops below the tire's cold pressure setting. A warning light typically located in front of the trailer is illuminated when air is being added to one or more low tires. The system has been specified by most of the top 100 fleets, with an ROI that has been validated to be typically less than one year. The payback comes in the form of fuel economy, reduced tread wear, fewer roadside calls, and lower labor costs. Other key benefits include reduced CSA point violations, increased safety and improved efficiency of equipment and driver hours of service.

P.S.I. made the system even better in 2005 when it released the patented ThermALERT™ feature, which is the only wheel end thermal event warning system of its kind. Since that time, it has become so widely specified that it has been made a standard feature in 2018. Additionally, P.S.I.'s ATIS has the ability to tie into trailer telematics systems that send a signal directly to maintenance when the warning light is illuminated.

P.S.I.'s ATIS is also marketed and distributed in North America by Meritor as the Meritor Tire Inflation System (MTIS).

[About Pressure Systems International](#)

Pressure Systems International is the world leader in automatic tire inflation systems, tire pressure monitoring systems and related products for commercial trucks and trailers. P.S.I. is a privately held company based in San Antonio, TX, and exports to 45 countries including China, India, South America, Africa, Australia and Europe. P.S.I. is a ISO 9001 Quality Management certified. For more information about Pressure Systems International visit their website www.psitireinflation.com
